I have a problem with a simple HQL Query (JPA Criteria), I would like to combine 2 searches. One of the query needs to be filtered by an aggregate function (group by). I have a order and order items class. The order item can be in multiple orders, and the order items are grouped by orderID and ordered by most recent order item ID select new orderitems( order.getOrderID(), order.getOrderItems().stream().filter(oi -> oi.getOrderItem().id orderItem.getOrderItem().getOrderItem().getItem()) .collect(Collectors.toList())) The problem is that this query does not return me any results, all items I have are in the first order, the rest are null. What am I doing wrong? Thanks in advance. A: You should use a subquery: select new orderitems(o.orderId, (select oi.getOrderItem().getOrderItem().getItem() from OrderItem oi where oi.getOrderItem().getId()
